Powering Ahead

The **Durable® Power Series** combines over a half century of recliner mastery with leading, proven technology to create something completely new to the healthcare space—fully adjustable infinite position power recliners featuring weightless zero gravity capability.

Features at a Glance

Precise Power Positioning

The back, seat, and foot rest angles of Durable® Power Series recliners can all be controlled individually via the power control wand, allowing caregivers to situate patients in any desired position, whether to replace a leg wrap or to prop up the feet without moving an injured upper body.

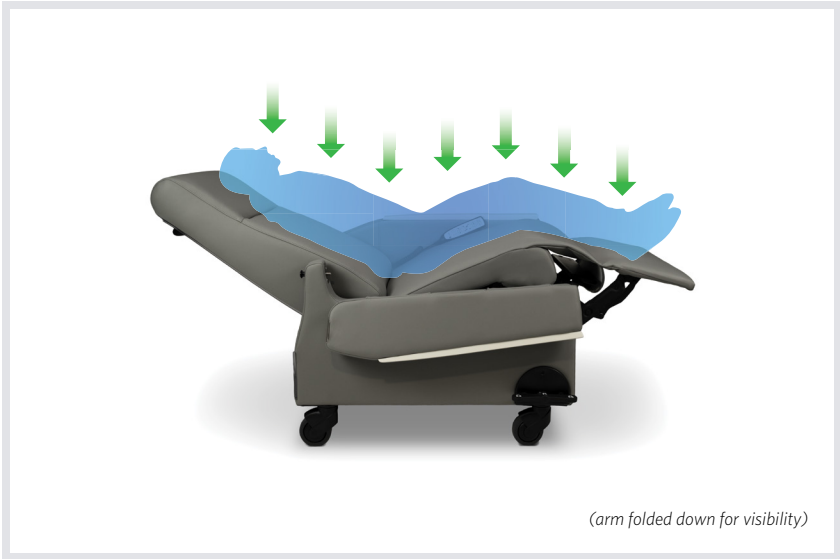

Designed for Easy Cleaning

All Durable® series recliners were created from the ground up with constant sanitization in mind. The quick removable back and lift up seat allow easy access (and visibility) to all surfaces for cleaning, and the base of the recliner has been specially designed with zero entrapment areas to prevent fluids from sitting—any spills go straight down to the floor to be quickly wiped away.

Weightless Zero Gravity

The term “zero gravity” in seating refers to a position that places the user’s body into its neutral posture—pressure is distributed evenly, instead of focused around the lower back and pelvic area, as with most chairs. A wand button preset programmed into the Durable® Power Series takes users to a median zero gravity position, which can be finely adjusted on every axis to allow each individual to find their unique, neutral weightless posture.

A Custom Fit

A full range of options allows the Durable® Power Series to be customized to any healthcare setting. From patient transfer arms (allowing seated or lay flat transfer) to heat and massage functionality, this recliner series can meet needs far beyond a simple chair and sleep surface. Options such as USB charging ports and monitor arms/ trays (to hold a tablet or gaming device) improve patient experience and help users feel at home.

ZG Recliner

Power Healthcare Recliner

Designed from the ground up for 24/7 healthcare environments with fully power operated recline via the wand controller, the ZG Recliner brings peak performance to match its unparalleled level of comfort. It breaks ground as the first healthcare specific recliner to offer users the weightless feel of the zero gravity position.

4" Central Locking Casters (standard)

Solid Surface Arm Caps

Push Bar & Edge Guard (standard)

Optional Pull Out Foot Tray

Central Locking Caster System Control Pedal

ZG Lift Assist Recliner

Power Healthcare Recliner with Lift Assist Functionality

Combining the landmark features of the ZG Recliner with added Lift Assist functionality to aid users as they exit the chair—all easily operated via the intuitive control wand. Enhanced safety features, such as the automatic locking caster system, further contribute to the wellness of patients and caregivers alike.

Control Wand Preset Positions

ZG Lift Assist Recliner in Zero Gravity Position

Upon engaging the control wand, the safety locking caster system automatically locks all casters to stop unwanted motion. A simple press of the pedal on the back—outside of patient reach—releases the brake so the recliner can be moved.

An optional Battery Backup unit is available, enabling recliner functions in the event of a power outage so users are always able to get back safely to the seated position.

ZG Exam Lift Recliner

Exam Lift Power Healthcare Recliner

The ZG Exam Lift Recliner is engineered with threefold functionality as a power recliner, exam surface, and sleep space (with true flatbed position). Raising to a 36" exam height in all recliner positions via the dual side foot pedals, it provides trusted comfort, performance, and durability in a single, versatile package.

Control Wand

Included with all Durable® Power Series Recliners

The control wand connected to each Durable® Power Series Recliner makes movement to any position easy and intuitive—no handles or levers to educate users on, just simple presets and individual directional buttons with graphics illustrating the corresponding movement. The buttons even light up momentarily when pressed to allow for late night adjustments.
