## The Knú Feel of Comfort

*More than the repose offered by a soft place to rest, Comfort can take meaning in every aspect of our world. It is a force to heal a troubled body, mind, and soul. And it is our passion.*

Comfort is designed and built into everything that comes out of our doors. It's the foundation of what we strive to create, and what we offer to those who most need it. Our ethos. From the initial spark that flashes through the mind of one of our dedicated engineers to the first time a new design leaves any one of our manufacturing facilities, Comfort is the guiding light that carries us through every step of the way.

With the arrival of a new day comes the onset of fresh challenges, innovative ideas, and previously unconsidered needs. This showcase of our newly released offerings combines a few strategically improved redesigns of some of our most popular seating options, along with brand new products that offer functionality to expand the capabilities of our patient room collections.

Our Kadia Mod Visitor Seating brings a modern, architectural design to our public area collections, with the addition of molded seat foam to bring new dimensions of Comfort. The three position Kure Recliner has been modified to provide a more comfortable experience and mobility. We've also added a tapered wood leg option to

our Kascade Lounge family, which adds a modern flair to one of our more popular lounge series. Lastly our Max Sleep Sofa Collection has added another highly functional configuration, a hydraulic lifting table in the center for dining, games, or any other need.

Culminating years of development, we are excited to release our Lift Exam Series of Recliners, available in both manual and power variations. While our recliner category has always been second to none in the availability of options to suit a vast spectrum of healthcare needs, the addition of the ability to raise a patient to exam height for treatment or examination makes our offering more versatile than ever. In a setting where space comes at a premium, the ability for one product to be used as a recliner, a sleep space with true flatbed recline, or an exam table at the press of a pedal makes it a choice of true value.

As we look onward, we hope you are able to see and feel the Comfort engineered into every product being offered, and you are able to experience the performance and durability that are foundational to what we make and who we are.

Hydraulic Pedal (Left Side Facing) & Ballistic Nylon Protection

Quad Locking Foot Pedal & 3" Dual Wheel Caster

## Hydraulic Lift Exam Recliner

The Hydraulic Lift Exam Recliner allows the caregiver to intuitively raise and lower the recliner from seated height, to exam height, and stop anywhere in between, while allowing the patient to operate the recliner manually. It comes standard with many important features, and is offered with extensive option combinations to provide the end user a chance to specify the perfect product for their application. Shown here is the Hydraulic Foot Pedal which is standard on each side of the recliner. There is a ballistic nylon material sewn into the bottom of the arm panel to help protect the chair material from extensive usage of the lift, Trendelenburg, or Quad Locking Caster pedals.

The Quad Locking Caster System is an important feature on a Lift Exam Recliner to provide stability when raising a patient up for examination, and is a standard option on all of our Lift Exam Recliners. The Quad Locking Caster System features 3" dual wheel rubber casters, which provide ultimate traction and stability. The Quad Locking Foot Pedal shown in the above image is standard on both sides of the recliner, in the front for easy access to lock all wheels with one action.

Standard Trendelenberg Pedal

Power Lift Exam Activation Pedal

## Power Lift Exam Recliner

The Power Lift Exam Recliner offers the same patient lifting functionality of the Hydraulic model, with the addition of the Power Motor and Foot Pedal Activation in lieu of the Hydraulic Pedal for a smooth and seamless travel range. It also comes standard with all the feature and option combinations as our Hydraulic Lift Exam Recliner. The Power Lift Exam Recliner is well suited for Hybrid Exam/Triage/Isolation Room applications where you can get all the functionality of an exam table, while taking up less space and providing recliner functionality when an Exam Table Treatment position is not needed.

## Power Exam Lift Activation Pedal

The Power Exam Lift Activation Pedal is marked with a "+" and a "-" which will raise and lower the recliner when activated by stepping on the pedal. The Activation Pedals are located on both sides of the recliner. The Power Lift Motor features an anti-crush emergency stop, which will halt the motor if an object comes in contact with the chair while it is being lowered back down. The Power Exam Recliner also features an auto-off cycle function, to protect the motor.

Titanium

## 350 Series Kure Recliner K0017

The re-imagined Kure Recliner has been enhanced and upgraded from the original. The revised seat position makes this product extremely comfortable. The three position mechanism that is incorporated in the design allows it to be a very versatile "controlled environment" recliner, suitable for wellness rooms, doctors lounges, office lounges, corporate waiting rooms, conference pods, residence halls, and hospitality. The Kure is offered with wood legs, metal legs, or the locking caster option which provides mobility as well as stability.

The Kure comes standard with wood legs and upholstered arms. You can enhance the product durability and aesthetic by adding urethane arm caps (shown above), which come in four different urethane colors: Taupe, Titanium, Carbon, and Black. You can enhance even more by moving to Solid Surface Corian Arm Caps if desired. There is a flip up side tray option available on this model as well.

These features and options make this an excellent choice for a client while providing comfort and durability for years to come.

3" Dual Wheel Caster

## Max Sleepers

The Max Series of Sleep Sofas has continued to be one of our fastest growing categories in terms of sales, models, and product enhancements. It is called Max, because it “maximizes” the user experience by providing multiple ways to utilize this product while never growing or expanding from its original footprint. The patent-pending Max Sleep Sofa with Hydraulic Lift Center Table allows users to sit and have an end table surface at the seated height, and if extended up, users’ legs can fit underneath the table and it can be used as a dining surface, working surface, or to simply enjoy a game of cards with friends or relatives.

The Max Series of Sleep Sofas has many different options to choose from to enhance the performance and comfort of the product, from leg rest extensions and locking casters, to power modules and surface materials.

## Kadia Mod

The re-imagined Kadia Mod has been engineered with clean lines, refreshing comfort, enhanced performance, and lifetime durability that you have come to expect from Knú Comfort®. The Kadia Mod Series features a molded foam seat which allows for exceptional comfort coupled with consistency in look and feel from one seat to the next in a public area setting. The Kadia Mod has a passive flex back integrated into the design, which allows for a slightly noticeable minor flexing of the back, which again provides added comfort as a standard. The Kadia Mod Series is a full family of products that has an integrated “wall saver” leg design, adjustable leveling glides, three standard powder coat frame colors, and unlimited color options available upon request. Urethane and Solid Surface Arm Cap options are available, as well as replaceable components should an update or reconfiguration be needed in the future.
