

Kenzley

Sleep Sofa

L A Z B O Y[®]
HEALTHCARE

Built for Healthcare, Day or Night

Comfort Meets Versatility

The Kenzley Sleep Sofa was crafted for superior comfort, durability, and cleanability. Enhancing the patient room with an inviting seating space in its sofa position, it seamlessly transitions to a distinct sleep surface with its simple and intuitive flop-style back. With multiple sizes, arm styles, leg styles, and other options, Kenzley can be customized to elevate any space.

Satisfying a Need

Developed to address specific requests from healthcare facilities, dual clean-out openings have been engineered into Kenzley to ensure debris or spills proceed straight to the floor, where the high-leg design allows quick, efficient sanitization.

Comfort in the Details

Kenzley was thoughtfully designed to maximize comfort for all individuals it connects with—from providing physical relief for a visiting loved one, to reducing strain for a caregiver, all the way to simplifying the cleaning process for facility staff.

Hospital Grade Power

Visitors can keep their devices charged with the optional hospital grade USB-C/USB-A/120 V outlet.

Built to Last

Engineered for 24/7 healthcare environments, a 900 lb weight rating and field replaceable parts extend Kenzley's life cycle while minimizing downtime.

Flop Style Back

The back cushion folds down quickly and intuitively to reveal the sleep area, which utilizes a distinct surface from the seat used while in the sofa position.

Expandable Sleep Space

The sleep surface is flush with the selected arms to maximize total sleep area, up to 88" wide with 5" arms. Sleep depth is 28.5" on all Kenzley models.

Arm Styles

A 3.5" contoured arm and 5" square arm are available, with an 8" arm arriving Summer 2024. Arms can be specified in any combination to meet your spacial and functional needs.

3.5" Contoured Arm Profile

Arm Caps

Urethane, thermofoil, and solid surface arm caps are available, each with a variety of finishes to choose from.

Leg Options

Match Kenzley to your environment with a metal leg or tapered wood leg, both available with multiple finish choices. Adjustable glides are standard on all legs.

Casters

For convenience in relocating or repositioning a sofa for cleaning, a full-height arm equipped with locking casters will be available Summer 2024.

Dual Seat/Sleep Clean-Outs

Clean-out openings are integrated into both the sofa and sleep positions—ensuring that any spills or debris fall directly to the floor, where the high-leg design allows swift and efficient sanitization.

A Custom Fit

Two standard seat widths, 70" and 78", along with multiple arm widths that can be mixed and matched, allow Kenzley to be customized to fit your specific space.

Engineered for Easy Cleaning

Consistent and thorough sanitization is an integral part of keeping patients safe. The development of Kenzley was ignited by feedback from major healthcare networks in search of patient room sleep solutions that work hand in hand with facilities staff in their infectious disease control efforts.

Dual Clean-Outs

The unique dual position clean-out openings mark a significant step forward in ease and efficiency of sanitization.

Accessible while in both the sleep position (*right*) and the sofa position (*right bottom*), these openings provide a path for liquids or debris to fall straight to the floor. Kenzley's elevated design allows easy access underneath the seat for quick cleaning without needing to move the sofa.

This design eliminates entrapment areas that would otherwise allow spills to gather and harbor bacterial growth. The openings have been carefully engineered to provide enough room to easily wipe them out, while being small enough to avoid a user accidentally placing an arm or leg inside.

Extensive Customization

In healthcare spaces, nothing is one-size-fits-all. From its multiple standard seat widths to various arm shapes and sizes (that can be mixed and matched), Kenzley was designed from the outset to offer deep customization options, ensuring it can match the aesthetic and dimensional requirements of nearly any environment.

Numerous finish choices across thermofoil, solid surface, and urethane arm cap materials can be paired with metal or wood legs to complement thousands of graded in textiles.

3.5" Contoured Left Arm & 5" Right Arm

Optional Hospital Grade Power

Wood Tapered Leg

Solid Surface Arm Cap
